

Folium Biosciences

To whom it may concern,

Folium Biosciences specializes in the cultivation of phytocannabinoid-rich hemp plants, extraction of hemp oil, and manufacture of finished products, as a wholesaler to other businesses.

Folium's product portfolio consists of raw materials and raw material intermediates, such as:
THC-free hemp oil,
THC-free water soluble hemp oil, and,
THC-free water-soluble hemp oil powder.

Folium's finished product portfolio made with THC-free hemp oil consists softgels, tinctures, vape oil, animal health, and personal care products that are based on proprietary or customized formulations.

All of Folium's products made with its THC-free line of raw materials do not contain any Delta 9-Tetrahydrocannabinol (Delta 9-THC). The absence of THC is ensured by following a qualified manufacturing protocol that removes THC entirely from the phytocannabinoid hemp oil, along with Quality Control tests that confirm that no THC is detected in the finished products upon manufacture. The checks and balances in place ensure that THC-free non-psychoactive products can reach our customers with an assurance that none of the regulatory or safety aspects resulting from the presence of THC remain a concern.

We take pride in our people and processes that are compliant with various regulatory requirements and invite customer visits/audits to share our best in class quality practices.
